

MATHEMATICS II

WORK SHEET 03

Exercise 1. Find the next anti-derivatives:

- ① $\int x(1 - x^2)^3 dx$ ③ $\int \frac{\ln x}{x} dx$ ⑤ $\int \frac{1}{x \ln x} dx.$
② $\int x\sqrt{1 + 4x^2} dx$ ④ $\int xe^{-3x^2+7} dx$

Exercise 2. Use substitution method to find the next anti-derivatives, then conclude there definite integrals.

- ① $\int \sqrt{\sin x} \cos x dx,$ $\int_{\frac{\pi}{2}}^{\pi} \sqrt{\sin x} \cos x dx.$
② $\int \frac{x}{x^2 + 1} dx,$ $\int_0^1 \frac{x}{x^2 + 1} dx.$

Exercise 3. Find the next integrals using integration by parts.

- ① $\int x \sin x dx.$
② $\int \ln x dx.$

Exercise 4. Calculate the next integrals.

- ① $I = \int_{-3}^1 |x + 1| dx.$ ③ $K = \int_2^0 \sqrt{|x - 1|} dx.$
② $J = \int_0^3 |x^2 - 3x + 2| dx.$

Exercise 5. Let f be a real function and $a \in \mathbb{R}$. Prove that

- ① If f is even, then $\int_{-a}^a f(x) dx = 0.$
② If f is odd, then $\int_{-a}^a f(x) dx = 2 \int_0^a f(x) dx.$
