Objectives

- It is necessary for students to understand the principles of correct programming and the relationship between programming and memory.

- In this course, students will delve into programming to understand the correct way to write and run a C program.

- Students will acquire knowledge on how to compile and run a long programs smoothly and fluently in C programming language using a convenient and consistent methods.

- Also, we will master the techniques that allow us to simply deal with a large program and a program with several variables and statements.

- The process of compiling and running a program will be understood by students in the correct manner.

- After students are informed about what is happening in memory, they will be able to organize the variables that have a common task into one element
